

Career Guide Reference

1. Purpose

This document provides basic career guidance information for university students and fresh graduates. It can be used as a reference for exploring career options, identifying skills, preparing for jobs, and creating career development plans.

2. Career Exploration

Students can explore careers based on:

- Educational background
- Interests
- Existing skills
- Career goals
- Work preferences
- Industry demand
- Opportunities for learning and growth

Before choosing a career path, students should understand what the role involves and what skills are commonly required.

3. Common Technology Career Paths

Software Developer

Typical Skills:

- Programming fundamentals
- Data structures and algorithms
- Git and version control
- Problem-solving
- Software development frameworks

Possible Technologies:

Python, Java, JavaScript, C++, Flutter, React

Data Analyst

Typical Skills:

- Excel or spreadsheets
- SQL
- Data cleaning
- Data visualization
- Basic statistics
- Data interpretation

Common Tools:

Excel, SQL, Power BI, Tableau, Python

Data Scientist

Typical Skills:

- Python
- Statistics
- Machine learning
- Data analysis
- Data visualization
- Problem-solving

Common Tools:

Python, Pandas, NumPy, Scikit-learn, Jupyter Notebook

AI / Machine Learning Engineer

Typical Skills:

- Python
- Machine learning
- Deep learning
- Data processing
- Model development
- Problem-solving

Common Technologies:

Python, TensorFlow, PyTorch, Scikit-learn

UI/UX Designer**Typical Skills:**

- User research
- Wireframing
- Prototyping
- Visual design
- Usability principles

Common Tools:

Figma, Adobe XD

Project Manager**Typical Skills:**

- Communication
 - Planning
 - Team coordination
 - Time management
 - Risk management
 - Problem-solving
-

4. Essential Professional Skills

Regardless of the career path, students can benefit from developing:

- Communication
- Problem-solving
- Teamwork
- Time management
- Critical thinking
- Adaptability
- Presentation skills
- Professional writing

5. Building a Career Development Plan

A simple career development plan can follow these steps:

Step 1: Identify a Career Goal

Choose a specific role or career area you want to explore.

Step 2: Identify Required Skills

Find out which technical and professional skills are commonly required for the role.

Step 3: Assess Current Skills

Identify the skills you already have and the areas where you need improvement.

Step 4: Create a Learning Plan

Choose courses, tutorials, projects, or other learning resources to develop the required skills.

Step 5: Build Practical Experience

Work on projects, internships, freelance tasks, volunteer work, or other practical activities.

Step 6: Build a Portfolio

Document relevant projects and achievements that demonstrate your skills.

Step 7: Prepare for Applications

Create and customize your CV, prepare your LinkedIn profile, and practice interviews.

Step 8: Review and Improve

Regularly review your progress and update your learning and career goals.

6. CV Preparation

A CV should normally include:

- Name and contact information
- Professional summary
- Education
- Technical skills
- Projects
- Work experience, if applicable
- Certifications
- Relevant achievements

CV Tips

- Keep the information clear and relevant.
 - Highlight skills related to the target role.
 - Use concise bullet points.
 - Include measurable achievements when possible.
 - Check spelling and grammar.
 - Customize the CV for different job applications.
-

7. Interview Preparation

Students can prepare for interviews by practicing:

General Questions

- Tell me about yourself.
- What are your strengths?
- What are your areas for improvement?
- Why are you interested in this role?
- Why should we consider you for this position?

Technical Questions

Technical questions depend on the job role. For example, a software development interview may include questions about programming, databases, APIs, data structures, and problem-solving.

Interview Tips

- Research the organization and role.
- Review relevant technical concepts.
- Practice explaining your projects.
- Prepare examples of your work.

- Answer questions clearly and honestly.
 - Ask relevant questions at the end of the interview.
-

8. Career Planning Questions

When helping a student plan a career, consider asking:

1. What is your educational background?
 2. What subjects or areas interest you?
 3. What skills do you currently have?
 4. What type of work interests you?
 5. What career role are you considering?
 6. What skills do you need to develop?
 7. Do you have any practical projects or experience?
 8. What is your short-term career goal?
 9. What is your long-term career goal?
-

9. Important Note

Career decisions depend on an individual's interests, skills, goals, experience, and circumstances. The information in this document provides general guidance and should be used as a starting point for career exploration.
